

Self-service weighing system with RFID and QR reader and Intercom. The terminal is equipped with RFID card reader or QR code reader and Intercom. The card or QR code carries information about the license plate number of the vehicle, company name, material, etc. Upon arrival at the scale, the driver attaches a card or QR code from a phone or document to the terminal. If communication with the operator is required, an Intercom is available on the terminal. The scale registers the information from the card and code and saves the weighing. For the second weighing, the process is repeated, the software then closes the weighing with the net weight calculation.

- ✓ QR/EAN code reader
- ✓ RFID reader
- ✓ NFC reader
- ✓ Intercom
- ✓ Visual signalling
- ✓ Audio signalling option
- ✓ Robust industrial design
- ✓ Different types of mounting
- ✓ Dockable printer
- ✓ Custom solutions
- ✓ Wide range of accessories (camera, lighting...)
- ✓ Developed and MADE IN SLOVAKIA

- 1/ Intercom
- 2/ Backlit confirmation buttons
- 3/ RFID & QR reader
- 4/ Protective cover, stainless steel
- 5/ Mounting bracket for column
