

Basic system for self-service weighing with RFID and QR reader. The terminal is equipped with an RFID card reader or QR code reader, which carries information about the license plate number of the vehicle, company name, material, etc. Upon arrival at the scale, the driver attaches a card or QR code from a phone or document to the terminal. The scale registers the information from the card and code and saves the weighing. For the second weighing, the process is repeated, the software then closes the weighing with the calculation of the net weight.

- ✓ QR/EAN code reader
- ✓ RFID reader
- ✓ Visual signalling
- ✓ Possibility of sound signalling
- ✓ Robust industrial design
- ✓ Different types of mounting
- ✓ Dockable printer
- ✓ Custom solutions
- ✓ Wide range of accessories (camera, lighting...)
- ✓ Developed and MADE IN SLOVAKIA

1/ Weight confirmation OK

2/ RFID & QR reader

3/ Protective cover, stainless steel
